

Tbilisi is the central city in Caucasia, for several Decades populations increased-2,5 Area-5 times.

As the most tightly populated region in Georgia, environmental problems are most problematic. There are problems such as: air and water pollution, urbanization in recreation areas.

Although studies about ecological situation have been conducted in the past, this is the first study in new borders. Also it is important that, this is the first time when urbanized area is involved in landscape planning.

Aim of research is to study and analyze Environmental problems of Tbilisi, inventorization these problems, will facilitate to make properly landscape planning, set out the ways improving Environmental situation, which gives us opportunity to avoid problems in the future.
